

## PRECISION UNIVERSAL CYLINDRICAL GRINDING MACHINE UCG 250 X 400

### MACHINE BED

High rigidity and stability through box structure asymmetrically ribbed design.

### TABLE

Table slide moves on precision hand scraped 'V' & flat guideways with continuous lubrication.

### WORK HEAD

The machine has a rigid universal work head. It has an alloy steel spindle running in special hydrodynamic bearings. Very easy to convert live to dead center or dead to live centers. Spindle clearance can be adjusted for different speeds.

### WHEEL HEAD

The spindle runs on high precision multipoint hydrodynamic bearings which give very high rigidity and excellent surface finish. The spindle is made of Alloy Steel, specially heat treated to achieve very high dimensional stability, accuracy and long life.

### TAIL STOCK

The Quill is carried in high precision special graded spher bearings, in which radial play can be adjusted within microns. Dresser block is also mounted on the tail stock body only.

### INTERNAL CLEARING HEAD

Mounted separately side of wheel head on infed slide thus providing rigid support to the spindle giving better surface finish in grinding. Internal Grinding operations can be done without removing external wheel.

### INFEED SYSTEM

The infed system moves on pre-loaded linear guideways. This guarantees high repetitive accuracy and stable alloy free low movement of the slide. Infed through hardened & precision ground cam.

### FOR AUTOMATIC MODELS

Grinding allowance and the required variable coarse and fine feed rates can be pre-selected. Spark out timer 0-60 seconds. PLC & Interfacing with any automatic in-process gauges (optional).

### AUTOMATIC GRINDING CYCLE

Single lever operates the grinding cycle automatically as follows: \* Rapid Approach- Coarse feed, low feed, spark out, rapid retraction of the wheel head. \* The Infeed Hand wheel to the starting position. \* Starts and stops work head and coolant motors automatically.

### LUBRICATION

The infed slide and internal slide is grease packed for life and the table slide is provided with automatic continuous lubrication.

### HYDRAULIC/ ELECTRICAL CABINET COOLANT UNIT

These units are housed out side the machine as separate units to provide easy maintenance. This description is only to UCG 250 X 400.

### Machines are offered in three versions:

a) UCG Universal      b) ECG Internal      c) ICG Internal

Some automatic 'S' model is available in all above three versions i.e., Infeed is manual but rapid stroke & table travel remains hydraulic.

Note: All specifications and designs are subject to alterations without prior notice.
